

# DEVops and how I twisted my ankle

# Keith Bawden

DevOps. What is  
the point?

An addiction to  
speed is unhealthy.

Once upon a time...

# Faster Deployments!

# Faster recovery times!

# Rapid Change!

# Lower Costs!

# More Money!

# We Devopsed

# All the things

My Code

**My Laptop**

Fast Build & Deploy

My Code

**Production**

We did that a lot,  
and we were fast

# Speed Kills

Fast

Made me sad..:(

Quality is not a  
dirty word

The ISO 8402-1986 standard defines quality as "the totality of features and characteristics of a product or service that bears its **ability to satisfy stated or implied needs.**"

# Good Enough

Once upon a time...

1,000s of  
deployments  
per day

20/day/person

# Environments

like containers

# Packages

# “Simple” Configuration

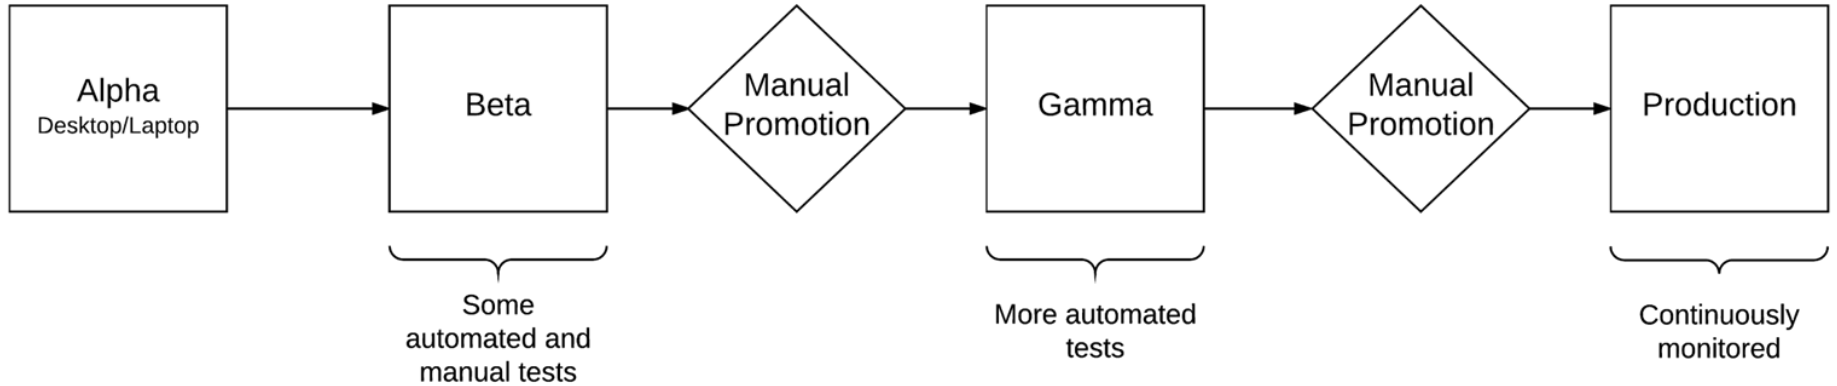

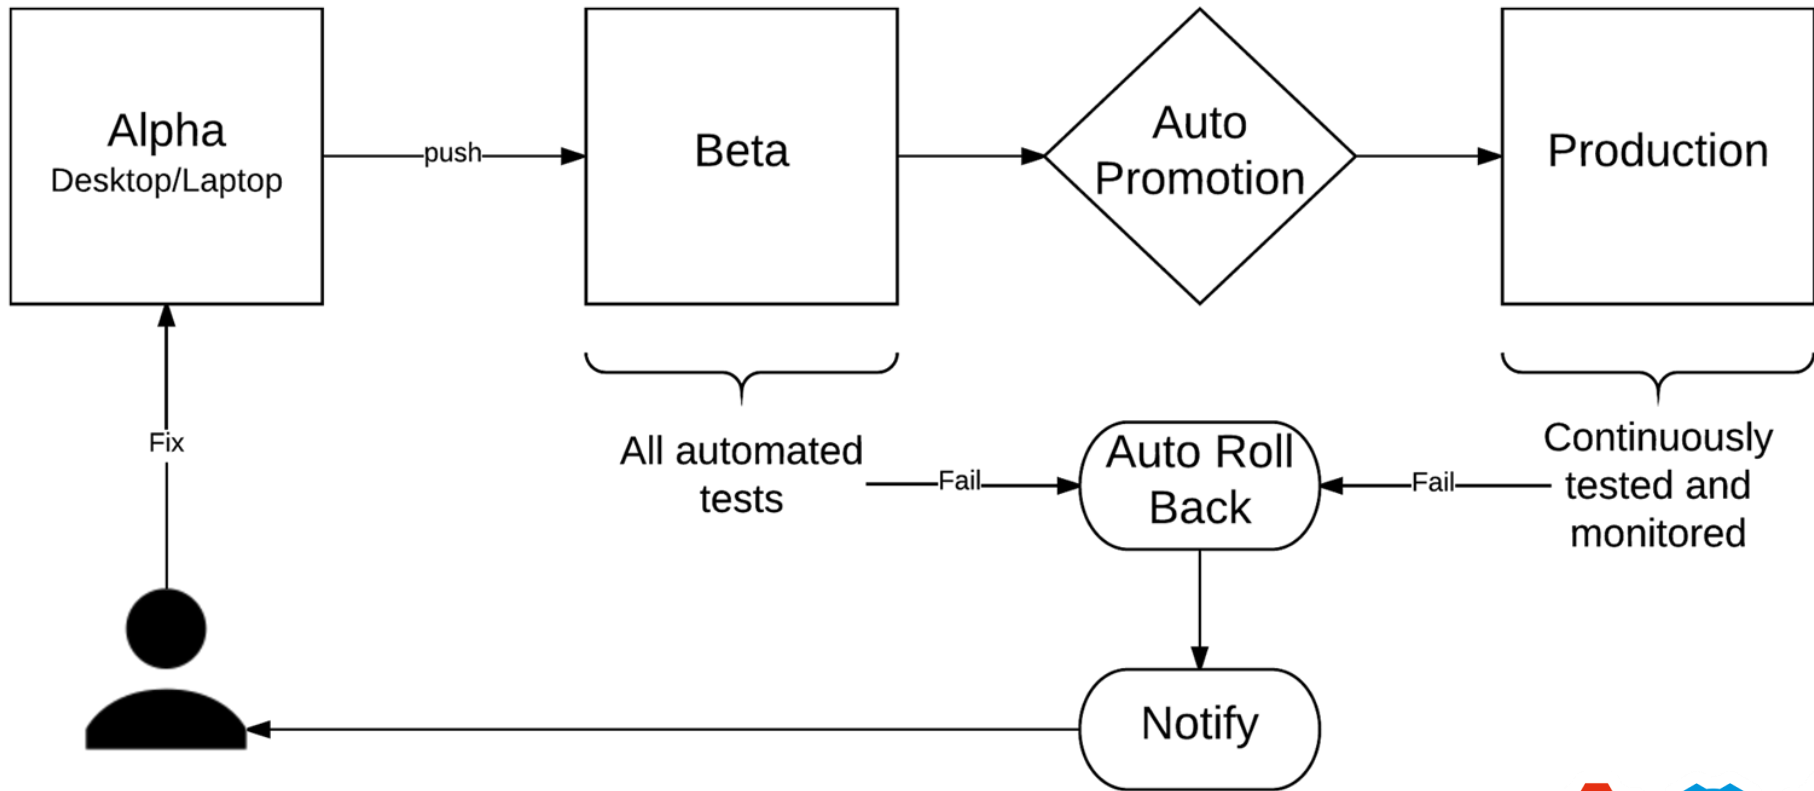

# Build & Test Locally

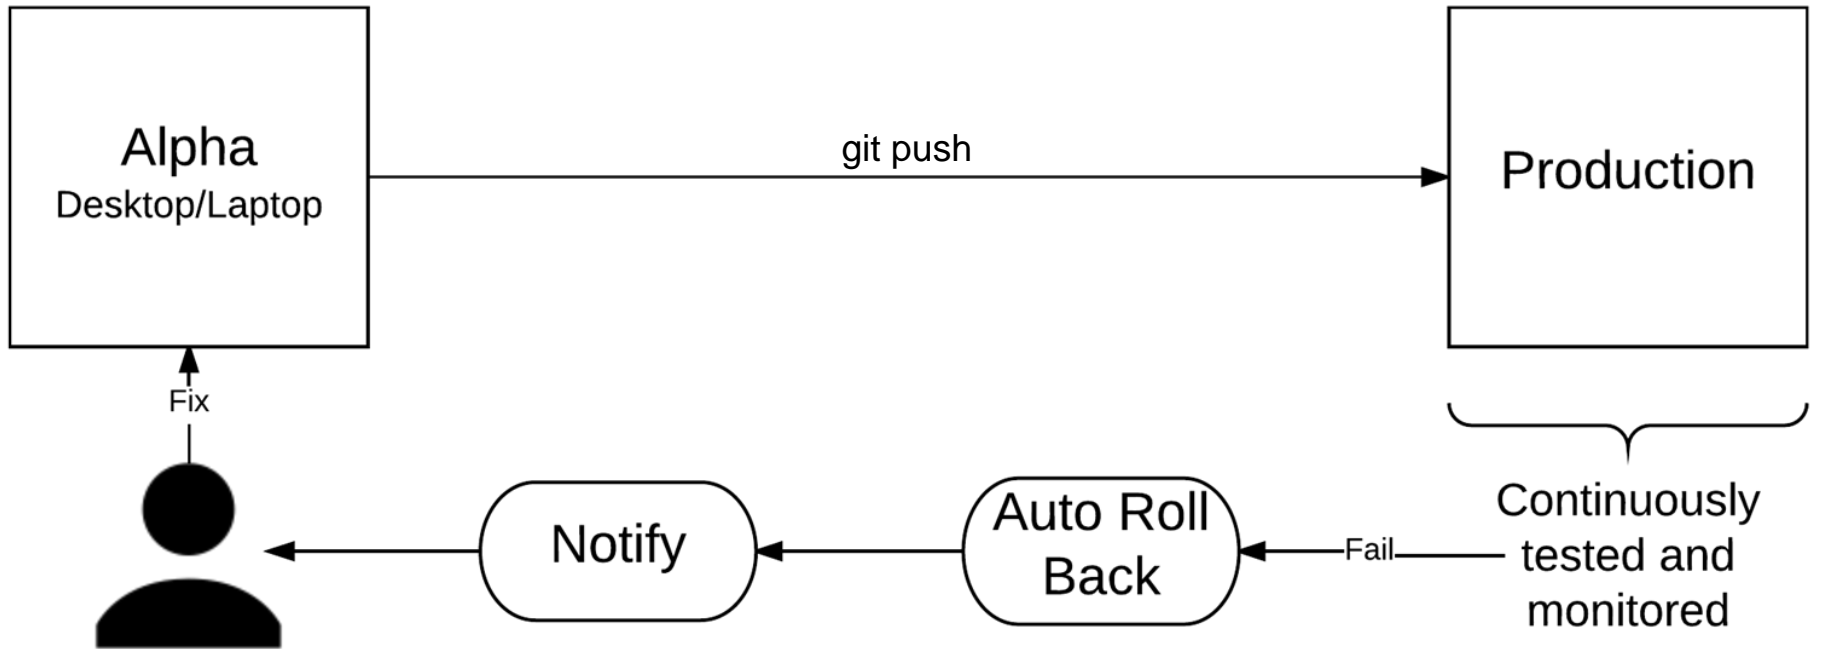

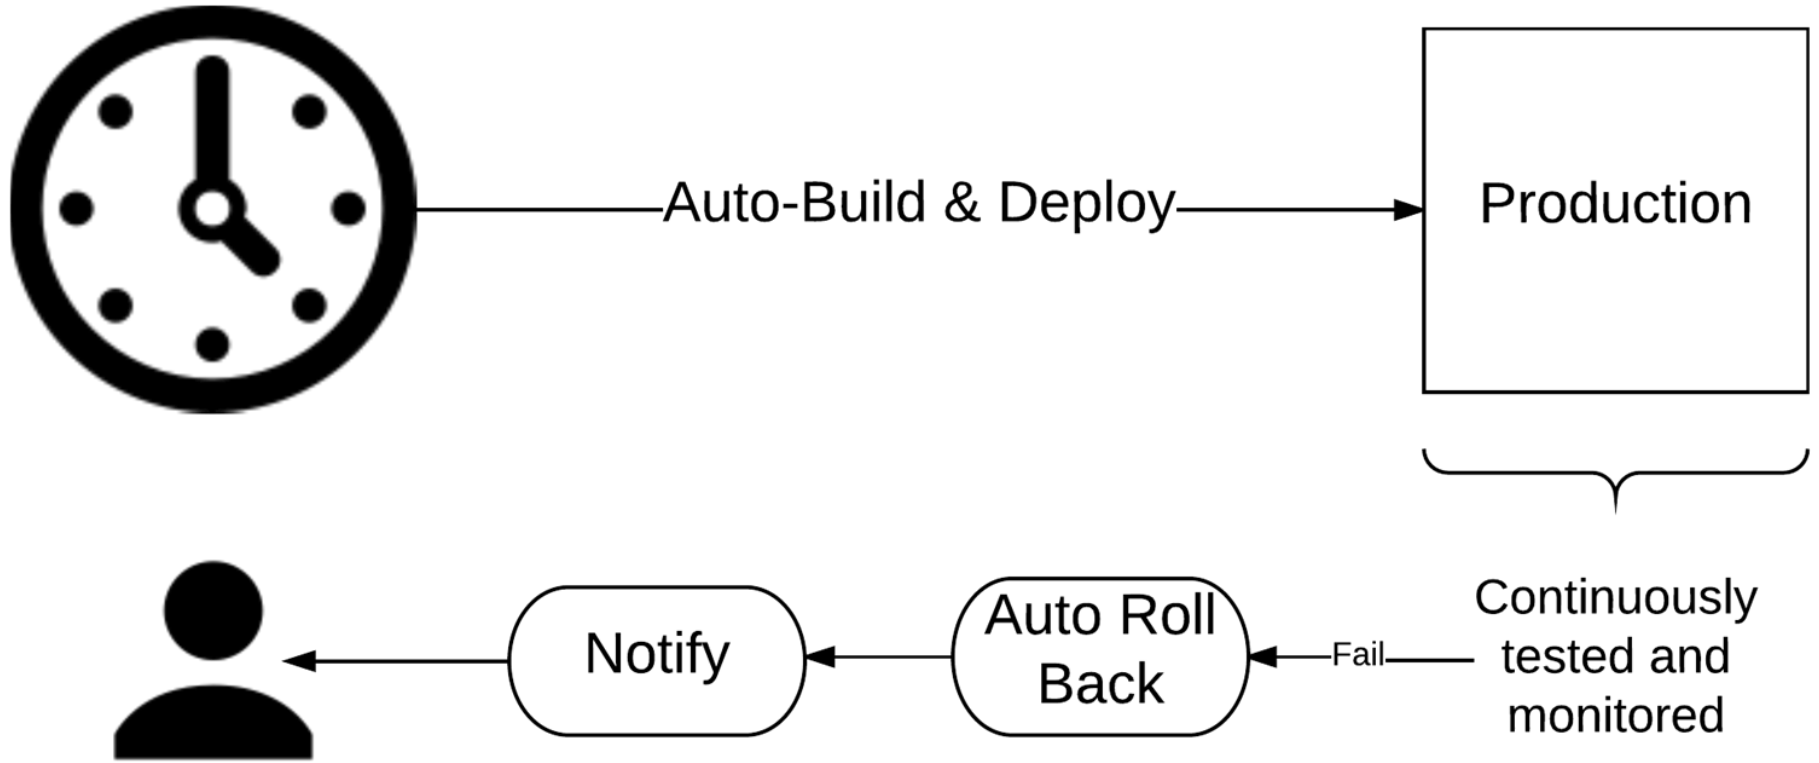

# Pipelines

git push  
and you're done

Better  
Not  
Faster

*Happily ever  
after...:)*

# Why DevOps?

We enjoy delivering  
quality outcomes to our  
customers and peers.

We continually improve  
whilst balancing quality,  
agility, and speed

With tools and processes  
that are simple, powerful,  
& reliable

# Speed Kills

Empower, Empathy,  
Focus, Responsibility
